

Equinix Sales Plays – Overview

This document outlines key sales play archetypes derived from Equinix's market positioning, products, and solutions. Each sales play includes a narrative describing its purpose, business context, and value proposition.

1. Hybrid Multicloud Enablement

This sales play enables enterprises to operate seamlessly across multiple cloud environments by leveraging private, high-performance interconnections. It is designed to address challenges such as latency, security, and cost inefficiencies associated with public internet-based connectivity.

- 1 Private connectivity to hyperscale cloud providers
- 2 Reduced latency and improved application performance
- 3 Optimized cloud networking costs
- 4 Enhanced security through private architectures

2. Digital Infrastructure Expansion

This play focuses on enabling enterprises to scale their infrastructure footprint globally. It supports rapid deployment of compute and storage capacity in strategic metros while ensuring consistency, reliability, and operational efficiency.

- 1 Global IBX data center footprint
- 2 Support for high-density and AI workloads
- 3 Scalable infrastructure deployment
- 4 High reliability and uptime

3. Interconnection & Ecosystem

This play leverages Equinix's dense ecosystem of partners, networks, and service providers to create powerful network effects. It enables enterprises to directly connect with key partners and customers, improving performance and accelerating business outcomes.

- 1 Direct partner and ecosystem connectivity
- 2 Reduced network hops and latency
- 3 Faster partner integration
- 4 Access to rich digital ecosystems

4. Edge & Low-Latency Deployment

This play is centered around deploying compute and networking capabilities closer to end users and data sources. It is critical for real-time applications that require minimal latency and high responsiveness.

- 1 Distributed edge infrastructure
- 2 Improved user experience for real-time applications
- 3 Reduced latency variability
- 4 Support for IoT, 5G, and streaming workloads

5. Security & Resilience

This sales play emphasizes building secure and resilient digital infrastructure. It helps organizations reduce exposure to threats while ensuring high availability and compliance with regulatory requirements.

- 1 Reduced attack surface via private connectivity
- 2 Support for zero-trust architectures
- 3 High availability and redundancy
- 4 Improved compliance posture

6. AI / High-Performance Compute

This emerging play supports AI and machine learning workloads by providing high-density, high-performance infrastructure with proximity to data and cloud ecosystems. It enables enterprises to scale AI initiatives effectively.

- 1 GPU-ready infrastructure
- 2 High power and cooling capacity
- 3 Proximity to data and cloud providers
- 4 Access to AI and partner ecosystems
